# JULI STORAGE EQUIPMENT CO., LTD.

## PRODUCT BROCHURE

— SUPER FACTORY —

## Company Profile

Shandong Juli Storage Equipment Co., Ltd. is a large enterprise that integrates the research and development, design, production, transportation, and after-sales maintenance of storage and logistics equipment. Established in 2016, the company now covers over 10,000 square meters and is equipped with a professional and experienced production team and multiple automated production lines.

The company's product range includes tire racks, carts, stack racks, metal bins, steel pallets, and customized solutions. Main products include All-steel Tire Storage Racks, Semi-steel Tire Storage Racks, Tire Stacking Racks, Tread Tray Trucks, Green Tire Trucks, Reel Cassette Carts, and various types of racks and trolley auxiliary equipment.

The company always adheres to a business philosophy of "innovation, high efficiency, integrity, and win-win." We emphasize strong production management, standardized product design structures, strict product quality control, continuous development of logistics application products, and providing professional warehousing planning to ensure customer benefits. We have won a good reputation and high customer satisfaction in the warehousing industry.

## Company Values

Innovation • High efficiency • Integrity • Win-win

## CATALOG

#### TIRE RACK SERIES

Tire Racks are special racks designed for storing tires. They can store tires in an orderly manner, save space, and facilitate management.

#### TROLLEY SERIES

Tool Trolleys are auxiliary equipment used in the tire production process, helping to improve overall efficiency and ensure quality stability.

#### STACKING RACK SERIES

Stacking Racks are used for stacking and storing goods. They have a stable structure and can be stacked in multiple layers to save storage space.

#### STEEL PALLET SERIES

Steel Pallets are made of high-quality steel. They are sturdy, durable, and have a strong load-bearing capacity. They are commonly used in logistics and warehousing.

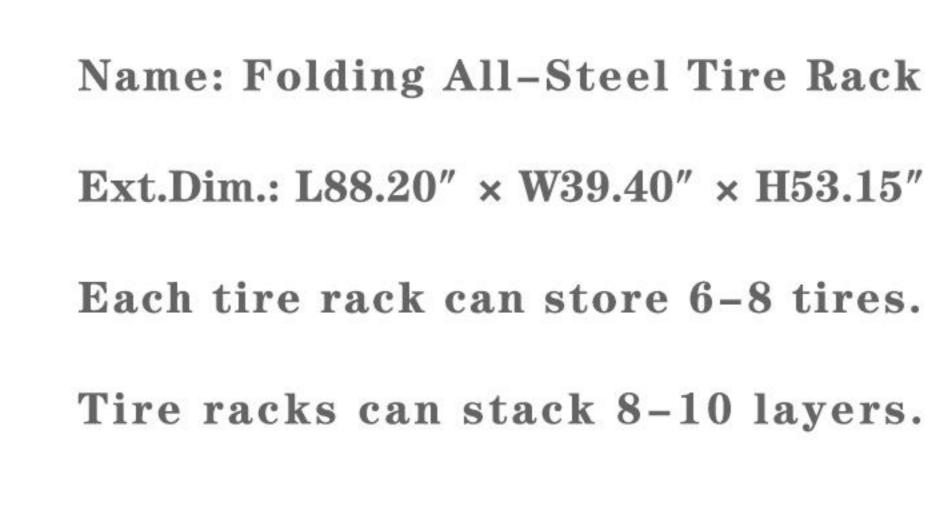

#### METAL MATERIAL BOX SERIES

Metal Boxes are designed for goods turnover and transportation, improving logistics efficiency and storage quality.

Name: Folding Semi-Steel Tire Rack Ext.Dim.: L86.60" × W50" × H37.60" Each tire rack can store 16-20 tires. Tire racks can stack 8-10 layers.

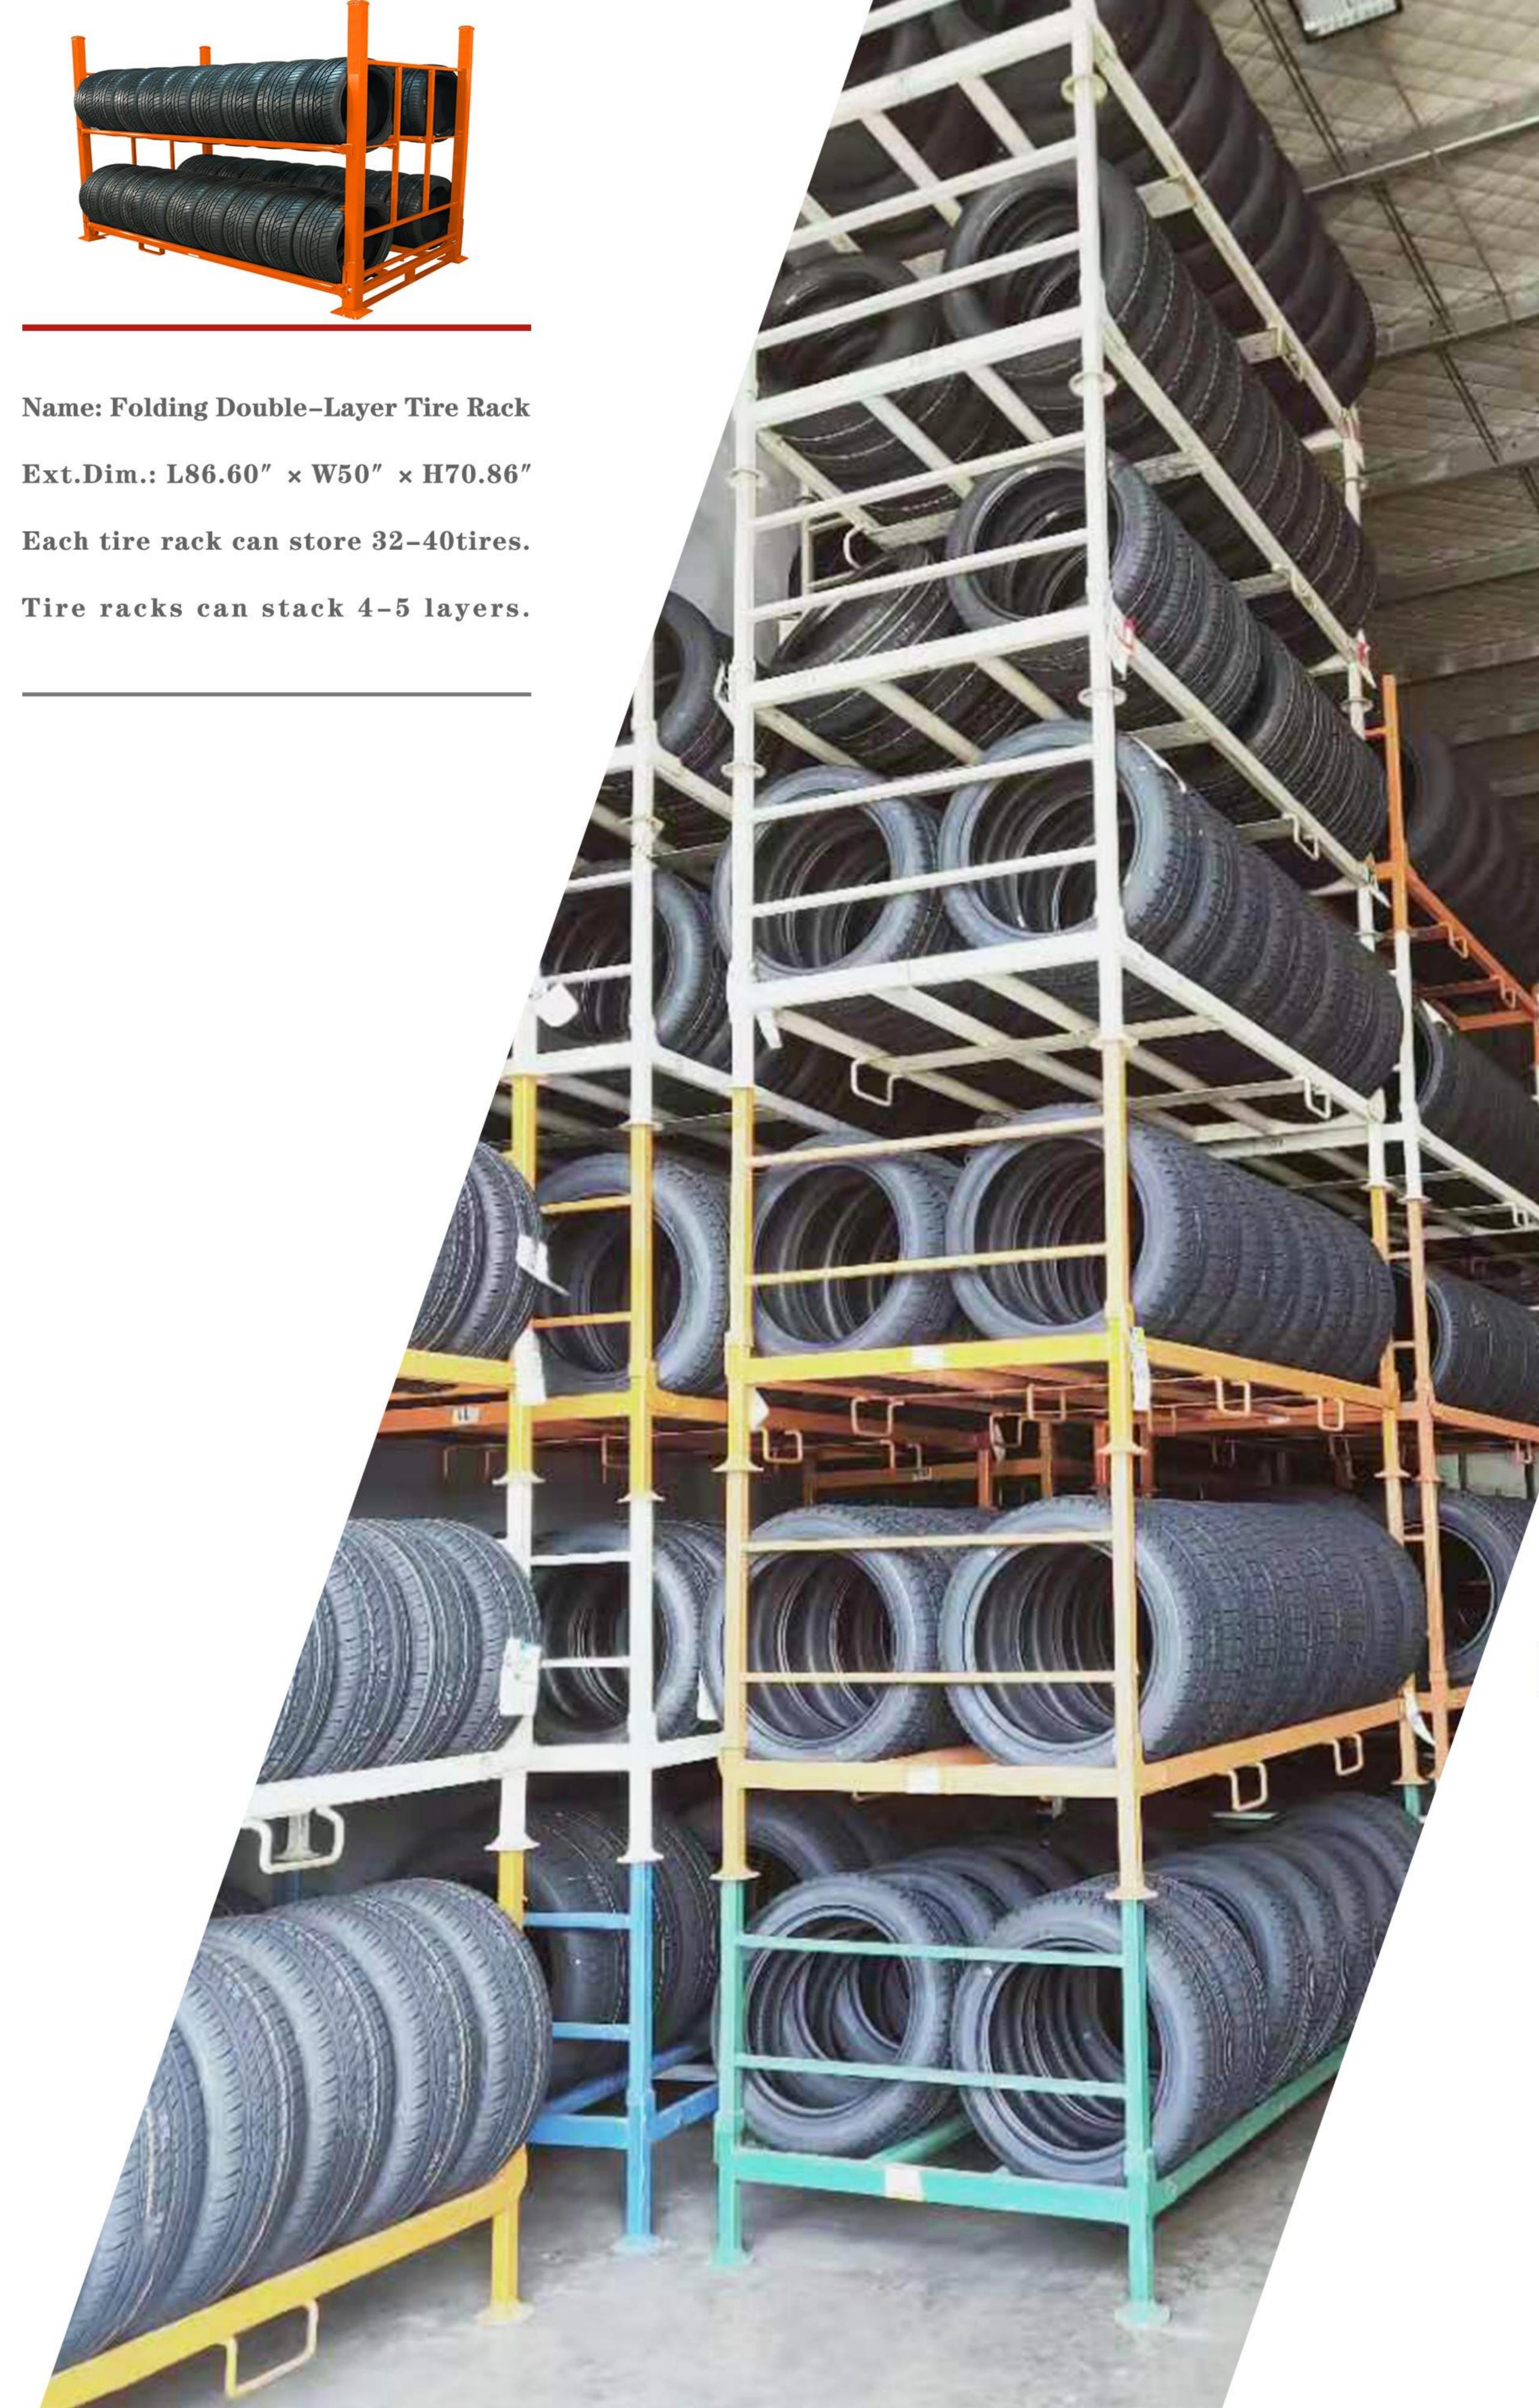

Name: Portable Semi-Steel Tire Rack Ext.Dim.: L60" × W60" × H60" Each tire rack can store 24-28 tires. Tire racks can stack 5-6 layers.

Name: Portable All-Steel Tire Rack Ext.Dim.: L92" × W40" × H70" Each tire rack can store 10-12 tires. Tire racks can stack 5-6 layers.

Tire rack advantages

- 1. Can be stacked in multiple layers to make full use of warehouse space.
- 2. Tires are neatly stacked for easy management and classification, improving efficiency.
- 3. Effectively protect tires, avoid mutual squeezing and collision between tires, and reduce the risk of tire damage.

## Auxiliary Trolley

In the field of tire production, various trolley equipment plays an important role. These trolleys perform their respective functions and collectively provide strong support for the high-quality production of tires, improving production efficiency, and optimizing the process flow. They are an indispensable and important part of tire manufacturing.

The green tire cart is a vehicle specially used to transport tire embryos, ensuring their safe and orderly flow flow and improving production efficiency.

The tread tray truck features a multi-layer pallet design, making it convenient for storing and transporting rubber proucts, thereby improving the efficiency of the production process.

The Reel Cassette Cart is used to carry and transport tire tread, ensuring the safe and convenient transportation of tire tread during the production process.

The Green Tyre Trolley is specially designed for green tire. It features a well-thought-out structure and ample space to facilitate the storage and efficient management of green tire, ensuring their quality and supporting orderly production.

The sidewall dual reel cart is specially designed for tire sidewalls. It features a stable structure and ample space, making it convenient for storing and transporting sidewalls. This design supports the efficient and orderly progression of the production process.

## Steel Pallet

# STACKING RACK

Stacking racks are widely used in warehousing and logistics and are an important equipment. They have a sturdy structure and a neat appearance, which is convenient for stacking goods. The stackable design can make full use of vertical space to increase capacity. The column poles can be folded or disassembled when vacant to save space.

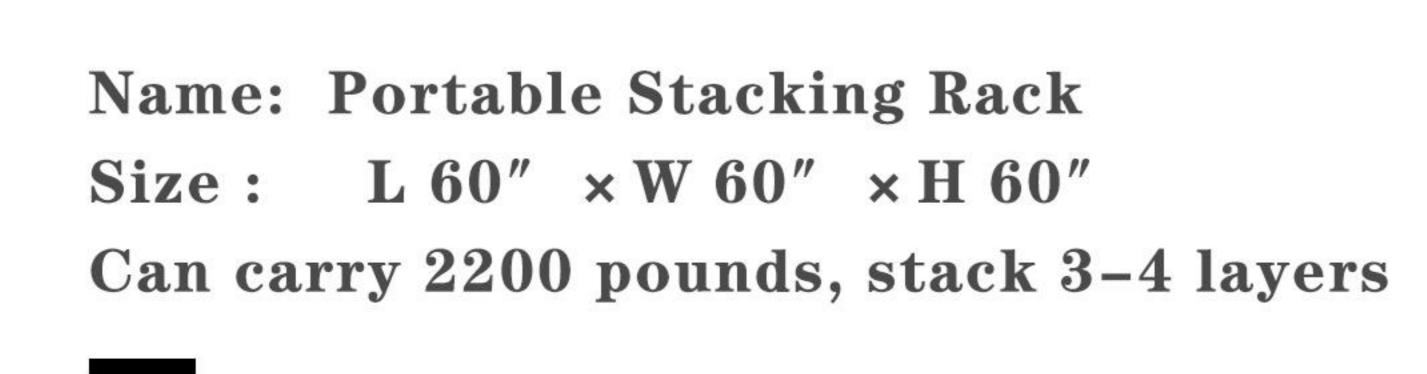

Name: Removable Stacking Rack Size: L 47.25" × W 47.25" × H 47.25" Can carry 2200 pounds, stack 3-4 layers

Name: Foldable Stacking Rack Size: L 47.25" × W 39.37" × H 39.37" Can carry 2200 pounds, stack 3-4 layers

### Steel pallets are commonly used in the logistics field. Made of high-quality steel, they have a stable structure and strong pressure resistance. They have a regular shape, are easy to stack and store, and save space. They can effectively protect goods from damage during transportation and storage. Moreover, steel pallets are easy to clean, reusable, have a long service life, and are cost-effective, providing reliable support for corporate logistics operations.

## Steel Pallet Series

# METAL MATERIAL BOX

Metal material box is a durable and reusable logistics container. Made of metal material, it has the characteristics of high strength, wear resistance and corrosion resistance. It is widely used in warehousing and transportation, which can effectively improve logistics efficiency and reduce costs.
